Resources Section

Data Science

Data Science

The application of computational methods to all aspects of the process of scientific investigation – data acquisition, data management, analysis, visualization, and sharing of methods and results.

ArcGIS for *spatial* data science

- ArcGIS is a *system of record*. Combine data and analysis from many fields and into a common environment.
- Why extend? Can't do it all, we support over 1600 GP tools — enabling *integration* with other environments to extend the platform.
- ArcGIS is an ecosystem that lends itself very nicely to the way that spatial data scientists already work.

What's in the Ecosystem

Python in ArcGIS

- Python API for driving ArcGIS Desktop and Server
- A fully integrated module: `import arcpy`
- Interactive Window, Python Addins, Python Toolboxes
- ArcGIS API for Python
- *Hosted Notebooks*
- Notebooks in ArcGIS Pro

Python Everywhere

The last decade of Python with ArcGIS

Foundational: ArcPy, Pro, REST API

Growth: Deep Learning, Python API, Conda, R

Core Python Libraries

Why SciPy?

- Most languages don't support things useful for science, e.g.:
 - Vector primitives
 - Complex numbers
 - Statistics
- Object oriented programming isn't always the right paradigm for analysis applications, but is the only way to go in many modern languages
- SciPy brings the pieces that matter for scientific problems to Python.

Included SciPy

Package	KLOC	Contributors	Stars
dask	52	229	4293
IPython	36	587	13408
JupyterLab	85	214	7396
NumPy	236	738	9868
Pandas	183	1433	18431
SciPy	387	699	5522
SymPy	243	730	5617

- Plotting library and API for NumPy data
- Matplotlib Gallery
- Pro *also* includes `arcipy.chart` for plotting via Pro charts
- UC 2020: Embedded Pro charts in notebooks

ArcGIS with NumPy

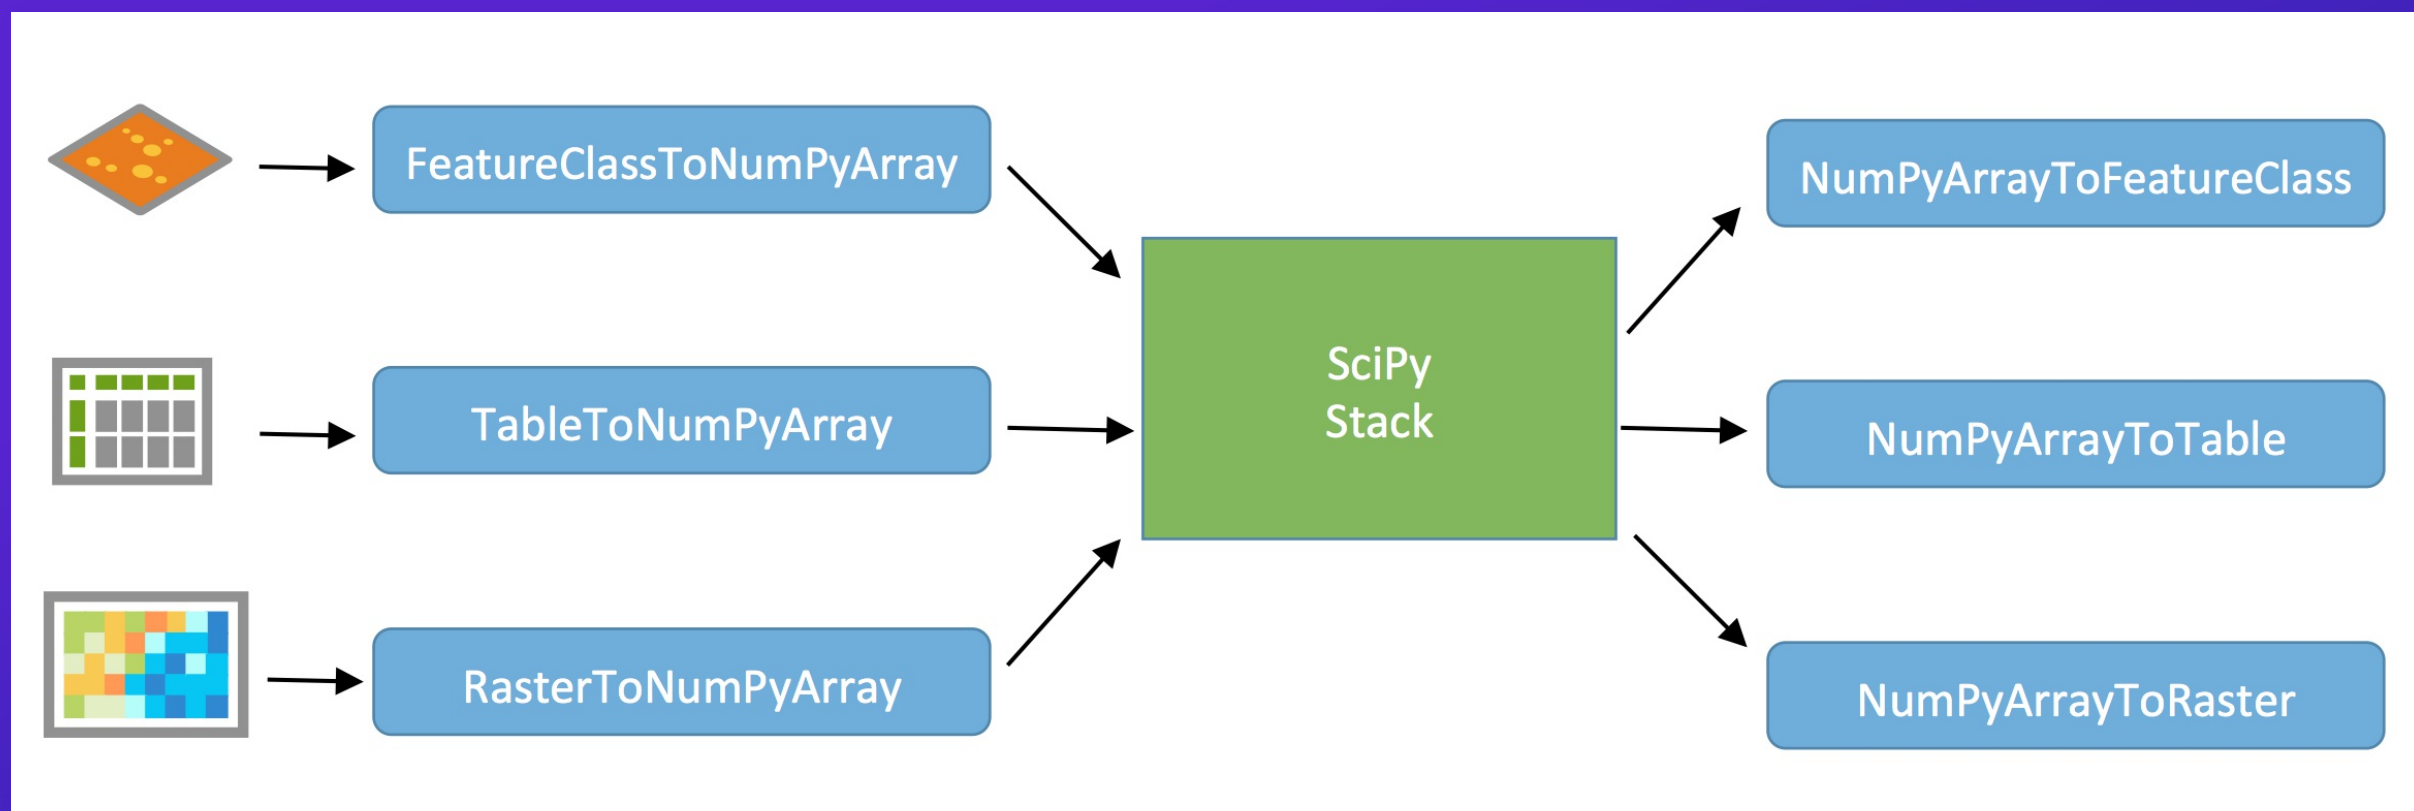

1. An array object of arbitrary homogeneous items
2. Fast mathematical operations over arrays

0	1	2	3	4	5
10	11	12	13	14	15
20	21	22	23	24	25
30	31	32	33	34	35
40	41	42	43	44	45
50	51	52	53	54	55

- ArcGIS and NumPy can interoperate on raster, table, and feature data.
- See *Working with NumPy in ArcGIS*
- In-memory data model. Example script to process by blocks if working with larger data.
- Use `arcgis`' SeDF if you need a high-level interface for feature data

ArcGIS with NumPy

Computational methods for:

- Integration (`scipy.integrate`)
- Optimization (`scipy.optimize`)
- Interpolation (`scipy.interpolate`)
- Fourier Transforms (`scipy.fft`)
- Signal Processing (`scipy.signal`)
- Linear Algebra (`scipy.linalg`)
- Spatial (`scipy.spatial`)
- **Statistics (`scipy.stats`)**
- **Multidimensional image processing (`scipy.ndimage`)**

Use Case: Benthic Terrain Modeler

Lightweight SciPy Integration

- Using `scipy.ndimage` to perform basic multiscale analysis
- Using `scipy.stats` to compute circular statistics

Lightweight SciPy Integration

Example source

```
import arcpy
import scipy.ndimage as nd
from matplotlib import pyplot as plt

ras = "data/input_raster.tif"
r = arcpy.RasterToNumPyArray(ras, "", 200, 200, 0)

fig = plt.figure(figsize=(10, 10))
```

Lightweight SciPy Integration

```
for i in xrange(25):  
    size = (i+1) * 3  
    print "running {}".format(size)  
    med = nd.median_filter(r, size)  
  
    a = fig.add_subplot(5, 5, i+1)  
    plt.imshow(med, interpolation='nearest')  
    a.set_title('{}x{}'.format(size, size))  
    plt.axis('off')
```

Pandas

pandas

$$y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$$

- Panel Data — like R “data frames”
- Bring a robust data *analysis* workflow to Python
- Data frames are fundamental — treat tabular (and multi-dimensional) data as a labeled, indexed series of observations.

Spatial Data Frames

- Same data frame model + geometries
- ArcPy + ArcGIS API for Python
- Continues to expand and improve performance

.New in ArcPy

ArcPy Improvements

- `arcpy.metadata` for transforming your metadata
- `arcpy.nax` for rich network analysis
- Raster cell iterators for custom per-cell raster analysis without needing to copy data using NumPy
`#DOCELLRISES`
- `arcpy.SetParameterSymbolology` for rich analytical results like Charts and popups

ArcPy Improvements

- Rich representations for data like `arcpy` geometries, rasters
- More coming UC 2020

Integration

Integration

- OK, so we've covered core libraries that exist within the Pro Python distribution. What about going beyond this?

Integration

- What kind of code is being run?

Bring your own

Existing libraries

Domain specific tools

Tools built and supported by Esri

Your components and ecosystem tools

The frameworks + tools that bind to them

- The Principle of stack minimization

Demo: MetPy

- Massive data parallelism through Python
- Computes graphs of the computational structure

Demo: Dask & Tying It Together

Integration

Leverage the broad data science ecosystems of R and Python

ANACONDA

Drive Integrated Code

Pro Python Distribution
Environment Management
Docker Runtimes (Hosted)
<https://anaconda.org/esri>

ArcPy and ArcGIS API

Integration includes:

- NumPy
- Pandas
- PyTorch
- Jupyter Notebooks

R-ArcGIS Bridge

RStudio
Geoprocessing Tools
Web Tools
Jupyter Notebooks

R

- R Statistical Programming Language
- Powerful core data structures for analysis
- Unparalleled breath of statistical routines

R-ArcGIS Bridge

- Access to local and remote data
- Transform to native R spatial types (`sf`, `sp`, `raster`)
- Call ArcPy through `reticulate`
- Use in RStudio
- Make GP tools which call R
- Jupyter Notebooks with R: `conda install r-arcgis-essentials`

Demo: R

from future
import *

Road Ahead

- Continued improvements in Deep Learning in Pro — make this experience as seamless and as simple as possible
- Rich representations (`__repr__`) for many objects in ArcPy and Pro
- ArcPy in External Conda environments (detects Pro)

Pro External Environments

The screenshot displays the Anaconda Navigator application window. The title bar reads "Anaconda Navigator" with standard window controls. The menu bar includes "File" and "Help". The main header features the Anaconda Navigator logo and the text "Signed in as scw" with a "Sign out" button.

The left sidebar contains navigation options: "Home", "Environments", "Learning", and "Community". The "Environments" section is active, showing a list of environments: "base (root)", "arcpy-36", "conda", and "nav". The "arcpy-36" environment is selected, indicated by a green bar and a play button icon.

The main content area is divided into two panes. The left pane has a search box labeled "Search Environments". The right pane shows a list of installed packages for the selected environment. At the top of this pane, there are tabs for "Installed", "Channels", and "Update index...", along with a "Search Packages" search box.

Name	T	Description	Version
<input checked="" type="checkbox"/> certifi		Python package for providing mozilla's ca bundle.	2018.11.29
<input checked="" type="checkbox"/> pip		Pypa recommended tool for installing python packages	19.0.3
<input checked="" type="checkbox"/> python		General purpose programming language	3.6.8
<input checked="" type="checkbox"/> setuptools		Download, build, install, upgrade, and uninsta...	40.8.0
<input checked="" type="checkbox"/> sqlite		Implements a self-contained, zero-configuration, sql database engine.	3.26.0
<input checked="" type="checkbox"/> vc		A meta-package to impose mutual exclusivit...	14.1
<input checked="" type="checkbox"/> vs2015_runtime		Msvc runtimes associated with cl.exe version 19.15.26726 (vs 2017 update 8)	14.15.26...
<input checked="" type="checkbox"/> wheel		A built-package format for python.	0.33.1
<input checked="" type="checkbox"/> wincertstore		Python module to extract ca and crt certs from windows' cert store (ctypes based).	0.2

At the bottom of the sidebar, there is a "Documentation" button.

Resources

New to Python

- Courses:
 - Programming for Everybody
 - Codecademy: Python Track
- Books:
 - Learn Python the Hard Way
 - How to Think Like a Computer Scientist

GIS Focused

- Python Scripting for ArcGIS
 - ArcPy and ArcGIS - Geospatial Analysis with Python
 - Python Developers GeoNet Community
 - GIS Stackexchange
- 

Scientific

Courses:

- Python Scientific Lecture Notes
- High Performance Scientific Computing
- Coding the Matrix: Linear Algebra through Computer Science Applications
- The Data Scientist's Toolbox

Scientific

Books:

- Free:
 - Probabilistic Programming & Bayesian Methods for Hackers
 - very compelling book on Bayesian methods in Python, uses SciPy + PyMC.
 - Kalman and Bayesian Filters in Python

Scientific

- Paid:
 - Coding the Matrix
 - How to use linear algebra and Python to solve amazing problems.
 - Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython
 - The canonical book on Pandas and analysis.

Packages

Only require SciPy Stack:

- Scikit-learn:
 - Lecture material
 - Includes SVMs, can use those for image processing among other things...
- FilterPy, Kalman filtering and optimal estimation:
 - [FilterPy on GitHub](#)
- An [extensive list of machine learning packages](#)

Code

- ArcPy + SciPy on Github
- raster-functions
 - An open source collection of function chains to show how to do complex things using NumPy + scipy on the fly for visualization purposes
- statistics library with a handful of descriptive statistics included in Python 3.4+.
- *TIP*: Want a codebase that runs in Python 2 and 3? Check out future, which helps maintain a single codebase that supports both. Includes the `futurize` script to initially a project written for one version.

Scientific ArcGIS Extensions

- PySAL ArcGIS Toolbox
- Movement Ecology Tools for ArcGIS (ArcMET)
- Marine Geospatial Ecology Tools (MGET)
 - Combines Python, R, and MATLAB to solve a wide variety of problems
- SDMToolbox
 - species distribution & maximum entropy models
- Benthic Terrain Modeler
- Geospatial Modeling Environment

Conferences

- PyCon
 - The largest gathering of Pythonistas in the world
- SciPy
 - A meeting of Scientific Python users from all walks
- GeoPython
 - The Python event for Python and Geo enthusiasts
- PyVideo
 - Talks from Python conferences around the world available freely online.
 - PyVideo GIS talks

Closing

Thanks

- Geoprocessing Team
- ArcGIS API for Python Team
- The many amazing contributors to the projects demonstrated here.
 - Get involved! All are on GitHub and happily accept contributions.
